Tool Information Page

Perceived Characteristics of Intervention Scale (PCIS)

Basic Information

The PCIS is a 20-item assessment measure developed to assess health care providers' views of interventions.

Transferability of measure across settings: Partially transferable (6 of 20 items transferrable)

Citing Literature

Development article: Cook JM, Thompson R, Schnurr PP. Perceived Characteristics of Intervention Scale: Development and psychometric properties. Assessment. 2015;22(6):704-714. doi:10.1177/1073191114561254.

Empirical use: Lau AS, Brookman-Frazee L. The 4KEEPS study: identifying predictors of sustainment of multiple practices fiscally mandated in children's mental health services. Implementation Science. March 2016:1-8. doi:10.1186/s13012-016-0388-4.

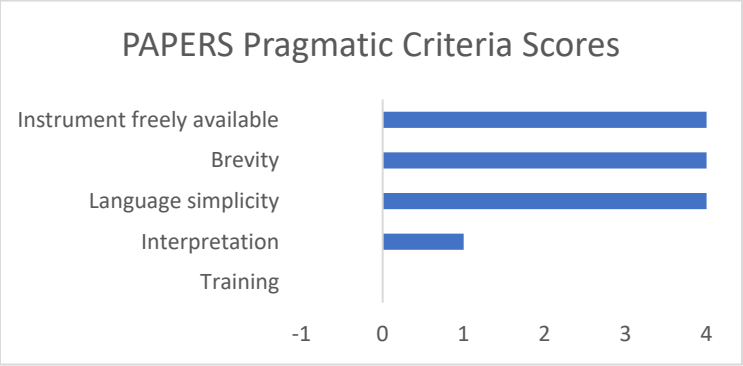
Policy Application in Reviewed Studies

Setting: Mental or behavioral health facilities
Topic: Mental or behavioral health
Country: United States

Constructs Measured

Implementation Outcomes: Appropriateness; Feasibility
Implementation Determinants: Adaptability; Relative advantage of the policy

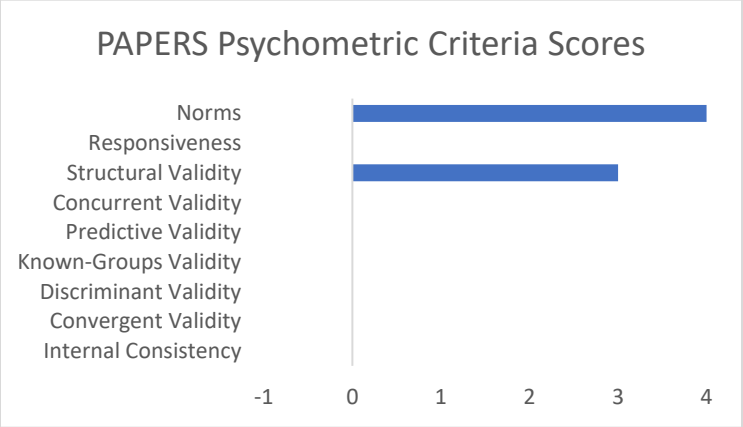
PAPERS Ratings



Overall PAPERS Pragmatic Score:

13

Note: Blank pragmatic constructs indicate inadequate reporting to assign a non-zero score.



Overall PAPERS Psychometric Score:

7

Note: Blank psychometric constructs were not reported in included studies.
Note: Additional subscale level psychometric properties are reported in the measure development article.
